Your success in Polyurethane

FrechBond®  
sticks!

## FrechBond® – the all-purpose adhesive

*Large surfaces, structural unevenness or mechanical damage – FrechBond® glues and repairs a whole variety of materials in plastic, metal, glass or wood.*

*FrechBond® gives you the ultimate quick fix, making it ideal for industrial applications.*

**Need more information? Don't hesitate to ask!**

## FrechBond® as a raw material

*The prepolymers we use in our FrechBond® range, give the ideal base materials adapted to your requirements for your adhesive.*

### Properties FrechBond®

- Adhesion
- Elasticity
- Shrinkage
- Hydrolytic stability
- Curing time
- Strength
- Chemical resistance
- Flame retardant

## FrechBond® – keeps it together

*Our **FrechBond®** products' versatile properties are ideal for industrial surfaces and components of any type – whether uniform or mixed materials, **FrechBond®** keeps it all together. Permanently!*

## FrechBond® – easy to use

*Adhesives are only as good as their process reliability in one-off and series production applications. The **FrechBond®** is characterised by its simple and user-friendly application, whether manual or automated.*

## FrechBond® – saves time

*Simple application, fast post-processing and flexible finishing all make for an effective work process, saving you valuable time and money.*

# Your individual requirements – our solution!

At each stage of creating your new product, from the development phase through materials selection to series production kick-off, we will provide support services and manufacture a product tailored to your specification. We have been developing high-quality polyurethane systems for the manufacturing industry as well as commercial end-users for more than forty years. Our customer application engineering centre has a multi-component dosing and mixing equipment for processing polyurethane systems such as sealing foam, encapsulants and adhesives. Your individual requirements always come first at FreChem.
